

860 KF Thermoprep

2.860.0010

Le 860 KF Thermoprep sert à la préparation thermique des échantillons dans le domaine des titrages Karl Fischer.

De nombreuses substances ne sont pas appropriées à l'analyse directe par titrage Karl Fischer car elles sont insolubles, réagissent avec le réactif KF ou ne libèrent leur teneur en eau que lentement ou seulement à température élevée. À l'aide de petits récipients échantillons hermétiquement fermés (vials), les échantillons sont transférés dans le four, où la teneur en eau est ensuite déterminée, à l'aide d'un titreur KF volumétrique ou coulométrique.

860 KF Thermoprep

The 860 KF Thermoprep is designed for thermal sample preparation in Karl Fischer titration.

Numerous substances cannot be analysed by direct Karl Fischer titration as they are not soluble, react with the Karl Fischer reagent or release their water only very slowly or not until heated to high temperatures. Using tightly sealed sample vials, the sample is inserted in the oven. The samples can be subsequently analysed by any volumetric or coulometric KF titrator.
