Vision Upgrade to Vision Pharma

The upgrade from Vision to Vision Pharma enables the use of Vision in regulated environments.

Vision Pharma fulfils the requirements of the FDA and other supervisory agencies.

Upgrading from Vision to Vision Multi enables you to profit from the advantages of a client/server installation. This version enables the editing of the data from different spectrometers from a central server computer.

Vision Multi contains 5 multi-user licenses.

Vision is the Metrohm software solution for method development and for controlling Metrohm XDS process instruments and B&W Tek instruments in a regulated environment.

The user-friendly graphics analysis interface makes it easy to apply chemometric algorithms for creating identification, qualification, and quantification methods.

Vision is the Metrohm software solution for method development and for controlling Metrohm XDS process instruments and B&W Tek instruments.

The user-friendly graphics analysis interface makes it easy to apply chemometric algorithms for creating identification, qualification, and quantification methods.

Vision Multi contains 5 multi-user licenses and is the ideal solution for setting up a server-client network.
