

Combined Ag ring electrode

6.00450.100

Combined silver ring electrode with fixed ground-joint diaphragm.

This electrode is suitable for precipitation titrations when the pH value varies (titrant silver nitrate) of, e.g.:

- Chloride, bromide, iodide
- Sulfides
- Hydrogen sulfide
- Mercaptans
- Cyanides

The fixed ground-joint diaphragm is insensitive to contamination and the permanently fused-in silver ring is resistant to more highly concentrated acids and saline solutions.

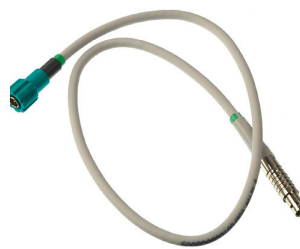

$c(\text{KNO}_3) = 1 \text{ mol/L}$ is used as reference electrolyte and storage solution.

Depending on the application, we recommend using an Ag ring electrode with a coating (AgBr, AgCl or Ag₂S coating), which can be ordered accordingly.
