

Combined polymer membrane electrode, Ca

6.0510.100

Combined calcium-selective electrode with polymer membrane.
This ISE is suitable for:

- ion measurements of Ca^{2+} ($5 \cdot 10^{-7}$ to 1 mol/L) in aqueous solutions
- complexometric (back) titrations (e.g., determination of water hardness)

Thanks to a robust/break-proof plastic shaft made of propylene and an impact protection for the polymer membrane, this sensor is mechanically very resistant.

The reference electrolyte used is $c(\text{NH}_4\text{NO}_3) = 1 \text{ mol/L}$.
